

Model				Priors		
Response variable (model type; <i>R</i> <i>package</i>)	Covariates (fixed, <i>b</i>) All variables scaled	Covariates (random)	Distribution (link)	Intercept	Slope	Residual standard deviation
Standard length (GLMM; <i>brms</i>)	Developmental temperature*Latitude Female standard length Density Age	Level/Tank Population Female Clutch order	Gaussian(identity)	Normal (31.5, 1.5)	Normal (0, 1.5)	Student t (3, 0, 4.4)
Mass (GLMM; <i>brms</i>)	Developmental temperature *Latitude Density	Level/Tank Female Population	Gamma(log)	Normal (1.13, 0.20)	Normal (0, 0.25)	NA
Condition (GLMM; <i>brms</i>)	Developmental temperature *Latitude Density Standard length	Level/Tank Female Population	Gamma(log)	Normal (1.13, 0.20)	Normal (0, 0.25)	NA
Critical thermal maximum (GLMM; <i>brms</i>)	Developmental temperature *Latitude Mass	Level/Tank Population Female Clutch order	Gaussian(identity)	Normal (37, 0.50)	Normal (0, 0.05)	Student t (3, 0, 0.1975)
Oxygen uptake (aerobic stress) (GAM*; <i>brms</i>) *Factor-smooth interaction term	Developmental temperature *Latitude*Temperature Mass	Female Tank	Gaussian	Normal (0.635, 0.20)	Normal (0, 0.20)	Student t (3, 0, 0.45)
